

# B&B SCALES UP ITS RANGE OF ATTACHMENTS WITH NEW WEIGHMASTER SYSTEMS

B&B Attachments, the leading supplier of fork lift truck attachments and masts, is expanding its range of products with the launch of three new weighing systems. Called the WeighMaster, each device offers a carefully balanced blend of performance and cost effectiveness by providing the lift truck user with the means to save time, effort and money whilst protecting the truck operator and load against the perils of overloading.

The WeighMaster systems are available in two separate versions to cater for varying applications. The WeighMaster Check System, is a hydraulic weighing device suitable for fork lift trucks, reach trucks and stacker trucks. On site installation is carried out quickly and easily with the weight sensor being fitted into the hydraulic circuit. As the oil pressure sensor is not sensitive to any mechanical force, this makes it virtually unbreakable. The WeighMaster Check System is fitted with a user-friendly industrial indicator, integrated exchangeable battery, error message display and switches itself off automatically after two hours of non-use.

WeighMaster Precision is suitable for heavy-duty applications and is integrated into the forks of the lift truck. Easy to install and to exchange, the WeighMaster Precision needs no cabling or adjustment to the lift truck as it has its own independent power supply. Operating independently from the fork lift, the system provides a high level of accuracy with a maximum error of just 0.1% of the applied weight. Resistant to shocks and vibrations, the WeighMaster Precision also is equipped with an LED, which provides an accurate, moment-by-moment visual display.

A further version is the WeighMaster Precision IP (integrated power). This has its power source fully integrated into the truck and is fitted by the qualified team of B&B Service Engineers.

The new WeighMaster systems can be retrofitted to existing trucks, will eliminate time-wasting operations at a stroke and removes the need for any discussion as to whether or not a truck is overloaded. It provides a cost effective system that enhances operators' safety, increases productivity and is fast, accurate and reliable.

B&B Attachments has without doubt, the greatest experience and attachments applications knowledge available in the industry. It is renowned for its national pre and post sales support from its well-established service centres located at the company's sites in Hungerford, Berkshire and Cramlington, Northumberland. The launch of the B&B Attachments' new WeighMaster range is a further commitment by the company to its customers in the UK and Ireland and acts as part of the company's planned expansion programme of both its products and services.
