

B&B LAUNCHES A COMPETITIVELY PRICED WORKING PLATFORM THAT MEETS PM28

A new, cost effective working platform that is fully compliant with Health & Safety Executive Guidance Note PM28 "Working Platforms On Fork-lift Trucks", has been launched by B&B Attachments, the leading supplier of masts and forklift truck attachments. Harnessing the versatility of the fork lift truck, the CageMaster System 28 provides a safe, working platform for high-level maintenance, routine inspection or stocktaking activities.

Available as an alternative to B&B Attachments' CageMaster range, which provides a more comprehensive control by integrally connecting the cage and fork truck when in operation, the CageMaster System 28 offers a convenient and more economic way of providing occasional access for working at height. Designed and constructed to the highest specifications and fully EC marked, the CageMaster System 28 weighs 157kg and has a capacity of 250kg.

Finished in safety yellow, resilient Polyester powder paint, the Cagemaster System 28 is available in three standard types. The SF provides a single function, which can isolate either the sideshift or tilt. A double function is provided by the DF and can be used when two functions are isolated. The TF isolates the reach function as well as the sideshift and tilt functions.

The CageMaster System 28 meets PM28 both prior to installation, and more importantly, once it is fitted to a fork lift truck. Safety features include a specially designed cage to avert injury; low-level kick plates to prevent equipment being kicked off the platform; twin safety harness points, and a high meshed rear guard to avoid contact with the fork truck's moving parts. All categories have a fail-safe device in case of mechanical failure.

Other features include positive behind heel locking to lock the platform to the truck forks; a backguard, gate and rails which are all of tubular construction and radiused in order to reduce risk; automatic locking, self-closing and latching gate locks, and a non-slip, self-draining floor. The CageMaster 28 System also includes the supply and installation of controls that immobilise the tilt and sideshift functions as well as full operating instructions and a certificate of conformity.

A further option is to also immobilise the reach function on the narrow aisle reach truck. Optional extras include swivel castors; tool tray; safety harness and lanyard, clipboard holder and fluorescent tube holder.

Working platform attachments must be safe, durable and correctly fitted to meet the new PM28 regulations. B&B Attachments CageMaster System 28 fully complies with all these requirements providing a secure, working environment at an affordable price.

Established for over 21 years, B&B Attachments is the UK's leading independent supplier of forklift truck attachments and masts. From its sites in Hungerford, West Berkshire and Cramlington, Northumberland the company services a client base that includes OEMs, forklift truck dealerships and end users.
